The Python Mega Course: Build 10 Real World Applications

92. Best Matches out of a List of Words

```

import json
data = json.load(open("data.json"))

def translate(word):
    w = w.lower()
    if w in data:
        return data[w]
    else:
        return "The word doesn't exist. Please double check it."
word = input("Enter word: ")
print(translate(word))

```

Play 3:41 / 6:07

Report – Report can be typed or hand written for up to two pages.

20/05/2020

```
def sentence_maker(phrase):
    syn = ("how", "what", "why")
    cap = phrase.capitalize()
    if phrase.startswith(syn):
        return "{}?".format(cap)
    else:
        return "{}.".format(cap)

results = []
while True:
    user_input = input("Say Something:")
    if user_input == "\end":
        break
    else:
        results.append(sentence_maker(user_input))
print(" ".join(results))

output:
Say Something : weather is good
Say Something ; how is the weather there
Say Something : bye
Say Something : \end
Weather is good. How is the weather there? Bye.
```

* The above program displays the result and joins the sentences using appropriate symbols.

Similarity ratio between two words:

```
import json
```

```
# data = json.load(open("data.json"))
```

```
def translate(w):
```

```
    w = w.lower()
```

```
    if w in data:
```

```
        return data[w]
```

```
    else:
```

```
        return "The word doesn't exist"
```

```
word = input("Enter word: ")
```

```
print(translate(word))
```

❖ A dictionary is a listing of words in one or more specific languages.

❖ The 'KEY' in the file is the actual word and

'VALUES' are the meaning of corresponding words.

❖ The algorithm of the program is

Input - Interface

Main program - Develop the word

Output - Program modifies it.

❖ When the input and data key matches, the corresponding meaning of the word is printed.
